**Disclaimer**

The designations employed and the presentation of material in this information product do not imply the expression of any opinion whatsoever on the part of the Food and Agriculture Organization of the United Nations concerning the legal status of any country, territory, city, or area or of its authorities, or concerning the delimitation of its frontiers or boundaries.

The document should be cited as follows:

**Oduor A.R. Gadain, H. M. 2007:** Potential of Rainwater Harvesting in Somalia, A Planning, Design, Implementation and Monitoring Framework, Technical Report NoW-09, 2007,FAO-SWALIM, Nairobi, Kenya.

## **Preamble**

In 2004, the Food and Agriculture Organization of the United Nations (FAO) established a project entitled Somalia Water and Land Information Management Systems, SWALIM. SWALIM's objective is to contribute to improved water and food security in Somalia by:

- collecting data needed for water and land resources management
- generating user-friendly information from the data
- storing the information in easily accessible databases and disseminating it through conventional and electronic media
- building capacity among Somali authorities to take over these functions in the future.

In March 2007, FAO-SWALIM signed a memorandum of understanding with ICRAF with the aim of producing a number of outputs. These include rainwater harvesting (RWH) classification scheme and definition system; identifying traditional water conservation systems; identifying technical and socio-economic factors for evaluating, planning and designing RWH projects; assessing the potential of RWH practices for increased agricultural or livestock production; and creating links between national institutions and international bodies or networks involved in RWH. The final output is a common framework for planning, designing, implementing and monitoring RWH projects.

To achieve these objectives and outputs, two rounds of trips were organized for fact-finding missions and consultative workshops in April and May 2007. These events took place in Puntland, Somaliland and Southern Somalia, drawing participants from relevant line ministries in government, UN agencies, international non-governmental organizations and community-based organizations. The draft framework was presented in Nairobi for ratification in June 2007. It is envisaged that the final products that include the framework document and assessment report on the potentials of RWH technologies shall act as reference material for policy makers to prioritize and guide community, government and external support agencies, on RWH investment options.

## Table of Contents

Disclaimer .....	i
Preamble .....	ii
Table of Contents .....	iii
List of Plates .....	vi
List of Annexes .....	vii
List of Tables .....	viii
List of Tables .....	viii
Acronyms .....	ix
Local terms.....	x
Acknowledgement .....	xi
<b>1. Introduction.....</b>	<b>1</b>
1.1 Background and general context.....	1
1.2 Problem statement.....	2
1.3 Objectives of the assessment .....	2
1.4 Methodology .....	3
1.5 Challenges, opportunities and benefits of RWH in Somalia .....	4
1.6 Expected outcome .....	6
<b>2. Climatic and Hydro-physical Factors Influencing Rainwater Harvesting in Somalia.....</b>	<b>7</b>
2.1 Rainfall.....	7
2.2 Potential evaporatranspiration .....	9
2.3 Air temperature and wind speed .....	9
2.4 Landforms and vegetation cover.....	10
2.5 Soil types.....	10
<b>3. Historical Development and Technological Options of RWH in Somalia.....</b>	<b>11</b>
3.1 Water resources in various regions of Somalia.....	11
3.2 Indigenous technologies .....	11
3.3 Current RWH technologies in Somalia.....	12
3.4 Technological options for RWH and conservation systems in Somalia.....	13
3.4.1 Ex situ agricultural RWH systems .....	13
3.4.2. In situ water conservation .....	14
3.4.3 Rainwater management for agro-forestry systems .....	16
3.4.4 Rainwater for livestock production.....	18
3.4.4 Domestic water harvesting systems in Somalia.....	18
3.4.6 Water conservation in sandy river beds .....	19
<b>4. Design of RWH Systems.....</b>	<b>21</b>
4.1 Introduction.....	21
4.2 Design considerations for agricultural systems - ponds .....	21
4.2.1 The catchment area .....	22
4.2.2 Conveyance mechanisms .....	23

4.3 Design considerations for berkads .....	30
4.3.1 The catchment area .....	31
4.3.2 Conveyance mechanism.....	31
4.3.3 Design considerations for storage.....	32
4.3.4 Abstraction of water for animal or domestic use .....	33
4.4 Design of roof water harvesting systems: the case of berkad guris .....	36
4.4.1 Design considerations and aspects for roof catchments .....	37
4.4.2 Conveyance, by pass and filtering mechanisms .....	37
4.4.3 Storage and abstraction.....	39
4.4.4 Demand-based approach to sizing a berkad guri .....	40
4.4.5 Total annual available rainwater from roof catchments .....	40
4.4.7 Sizing roof rainwater tanks using nomographs.....	42
<b>5. Quality Aspects of Stored Rainwater .....</b>	<b>44</b>
5.1 Introduction.....	44
5.2 Domestic water treatment techniques .....	44
5.2.1 Leaf screening.....	44
5.2.2 Manual foul flush mechanisms .....	45
5.3 Agricultural water quality management.....	50
5.4 Livestock water quality requirement .....	50
<b>6. Assessment of RWH Potential for Somalia .....</b>	<b>53</b>
6.1 Introduction.....	53
6.2 Assesment of RWH potential for Somalia .....	53
<b>7. Institutional and Policy Aspects in RWH Projects .....</b>	<b>56</b>
7.1. Overview of current status.....	56
7.2 Excerpts from existing water policies.....	56
7.3 Role of local and external support agencies .....	57
<b>8. Planning, Implementation and Monitoring of RWH Interventions.....</b>	<b>59</b>
8.1 RWH projects implementation .....	60
8.2 RWH projects monitoring and evaluation .....	61
<b>9. Conclusions and recommendations.....</b>	<b>63</b>
References.....	64
Annexes.....	66

## List of Figures

Figure 1: Change in construction quality over time.....	5

## List of Plates

Plate 1: Participants during consultative workshops in Garowe, Hargeisa and Baidoa ....	3
Plate 2: A typical Berkad guri depicting the catchment, conveyance and storage components .....	19
Plate 3: A typical ephemeral stream with a sandy riverbed in Somalia.....	20
Plate 4: A balley filled with water during the rainy season .....	22
Plate 5: Runoff conveyance channel during construction.....	23
Plate 6: Runoff conveyance channel in north-west Somalia after having developed into a gully and conveying a lot of silt to the pond.....	24
Plate 7: A section of a balley embankment destroyed by 2007 Gu rains .....	28
Plate 8: A typical berkad in Somalia.....	30
Plate 9: Siltation of a berkad .....	31
Plate 10: Mitigating evaporation losses from berkads using grass covers.....	33
Plate 12: A Berkad guri showing the roof runoff harvesting components .....	36
Plate 13: Current practice of drawing water from the berkad guris.....	40
Plate 14: A guide for harvestable domestic roof water.....	41

## List of Annexes

Annex 14: Factors to consider in the planning, design, and implementation of agricultural RWH systems.....	80
Annex 15: Factors to consider in the planning, design, and implementation of domestic RWH systems.....	81
Annex 16 Analysis for Borama 20mm Rainfall threshold.....	82
Annex 19: Runoff water harvesting potential for agriculture and rangelands.....	85
Annex 22: Rainwater Harvesting Potential for Garoowe .....	88
Annex 23: Rainwater Harvesting Potential for Garowe .....	89
Annex 24: Rainwater Harvesting Potential for Hargeisa.....	90
Annex 25: Rainwater Harvesting Potential for Borama .....	91
Annex 26: Rainwater Harvesting Potential for Borama .....	92
Annex 27: Rainwater Harvesting Potential for Bossaso.....	93
Annex 28: Rainwater Harvesting Potential for Bossaso.....	94
Annex 29: Rainwater Harvesting Potential for Jowhar .....	95
Annex 31: Streams feeding into for Somalia.....	97

Table 6: Guide to the use of water containing nitrates for livestock and poultry .....	51
Table 7: Guide to the use of saline water for livestock and poultry .....	52
Table 8: Runoff potential in volumes for the agriculture and rangeland sectors.....	54

## Acronyms

<i>ACZ</i>	Agro-climatic Zone
<i>AfDB</i>	African Development Bank
<i>CA</i>	Conservation Agriculture
<i>CBO</i>	Community-Based Organization
<i>DEM</i>	Digital Elevation Model
<i>FAO</i>	Food and Agriculture Organization of the United Nations
<i>ICRAF</i>	The World Agroforestry Centre
<i>ITCZ</i>	Inter-Tropical Convergence Zone
<i>RELMA</i>	Regional Land Management Unit
<i>RWH</i>	Rainwater Harvesting
<i>SWALIM</i>	Somalia Water and Land Information Management Systems
<i>SWC</i>	Soil and Water Conservation
<i>UN</i>	United Nations
<i>UNECA</i>	United Nations Economic Commission for Africa
<i>USD</i>	United States Dollar

## Local terms

<i>balli</i>	A natural depression on flatter silt soils that collect surface runoff with water-holding capacity ranging from less than 1000 m <sup>3</sup> to more than 100,000 m <sup>3</sup> .
<i>war</i>	A stock pond excavated either by hand, and within the last 15 years by machinery, in heavy sealing soils whose capacity for holding water ranges from less than 100 m <sup>3</sup> to more than 10,000 m <sup>3</sup> .
<i>berkad</i>	A concrete-lined reservoir roofed either with corrugated iron sheets or shaded with small bushes suspended over the tanks with nets. Its capacity ranges from 30 to 400 m <sup>3</sup> .
<i>xurfad</i>	Either a water pond or earth dam.
<i>ceel</i>	A hand-dug well.
<i>berkad guri</i>	Roof water harvesting.
<i>majaroor</i>	Roof water harvesting.
<i>naxaroor</i>	Soil bunds constructed to conserve both soil and water.
<i>xadhig</i>	Soil bunds constructed to conserve both soil and water.
<i>il</i>	Natural spring
<i>doox xidh</i>	A sub-surface dam constructed in sandy rivers
<i>deshek</i>	Flood-diversion techniques used for delivering flood water for irrigation purposes
<i>mugsid</i>	An underground reservoir
