

Juba at Jamame

Latitude: **0: 1:10 N**
Longitude: **42:41: 0 E**
Operator:
Catchment Area: 268800 sq km
Altitude: Thenstation is at sea level

Station Description

This is the lowermost station along the Juba. It was established in 1963 but only operated intermittently since then. Exceptionally, flows at this station may be affected by drainage from the catchment of the lower shabelle.

The station is not operation currently and SWALIM hopes to re-establish early 2006.
