

Somalia Rainfall Forecast

Issued: 04 April 2018

The last few days saw increased rainfall activities in some parts of northern and southern regions of Somalia.

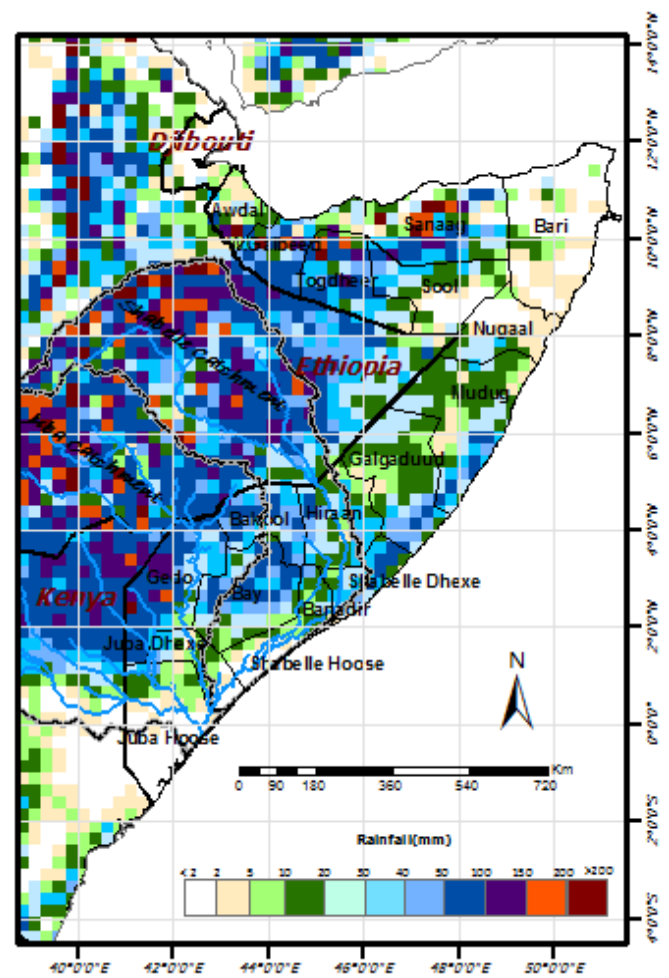

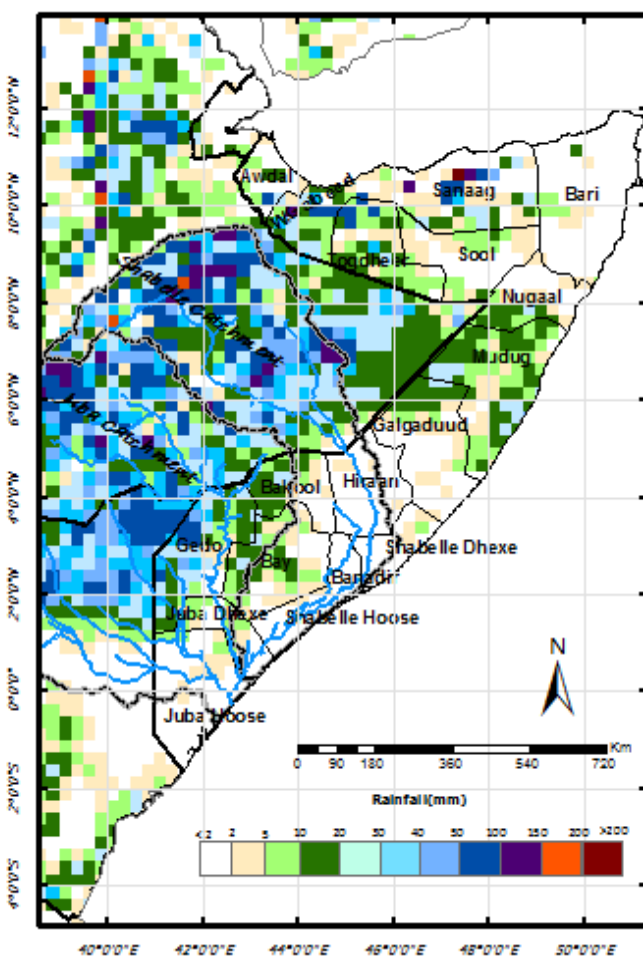

The three days rainfall forecast (Map 1) points towards moderate rainfall in parts of Togdheer, W. Galbeed, Middle Juba and Gedo regions with light showers in a few pockets across the country. The seven days (Map 2) rainfall forecast indicates increased rains both in the Ethiopian highland and across Somalia as the week progresses.

Given the rainfall forecast, the river levels are expected to continue rising gradually in the coming week with no risk of flooding along the Juba and Shabelle Rivers in Somalia.

Users are advised that this is a forecast and at times there may be discrepancies between forecast and actual amounts of rainfall received. The forecast, observed river levels and rainfall amounts are updated on a daily basis and can be found on this link: <http://systems.fao.net/frirms/>

Map 1: 3 days rainfall forecast

Map 2: 7-day cumulated rainfall forecast
