

Somalia Rainfall Forecast

Issued: 06 November 2017

The last few days continued to record good rains in many parts of the southern and central regions of Somalia while the northern regions remained relatively dry.

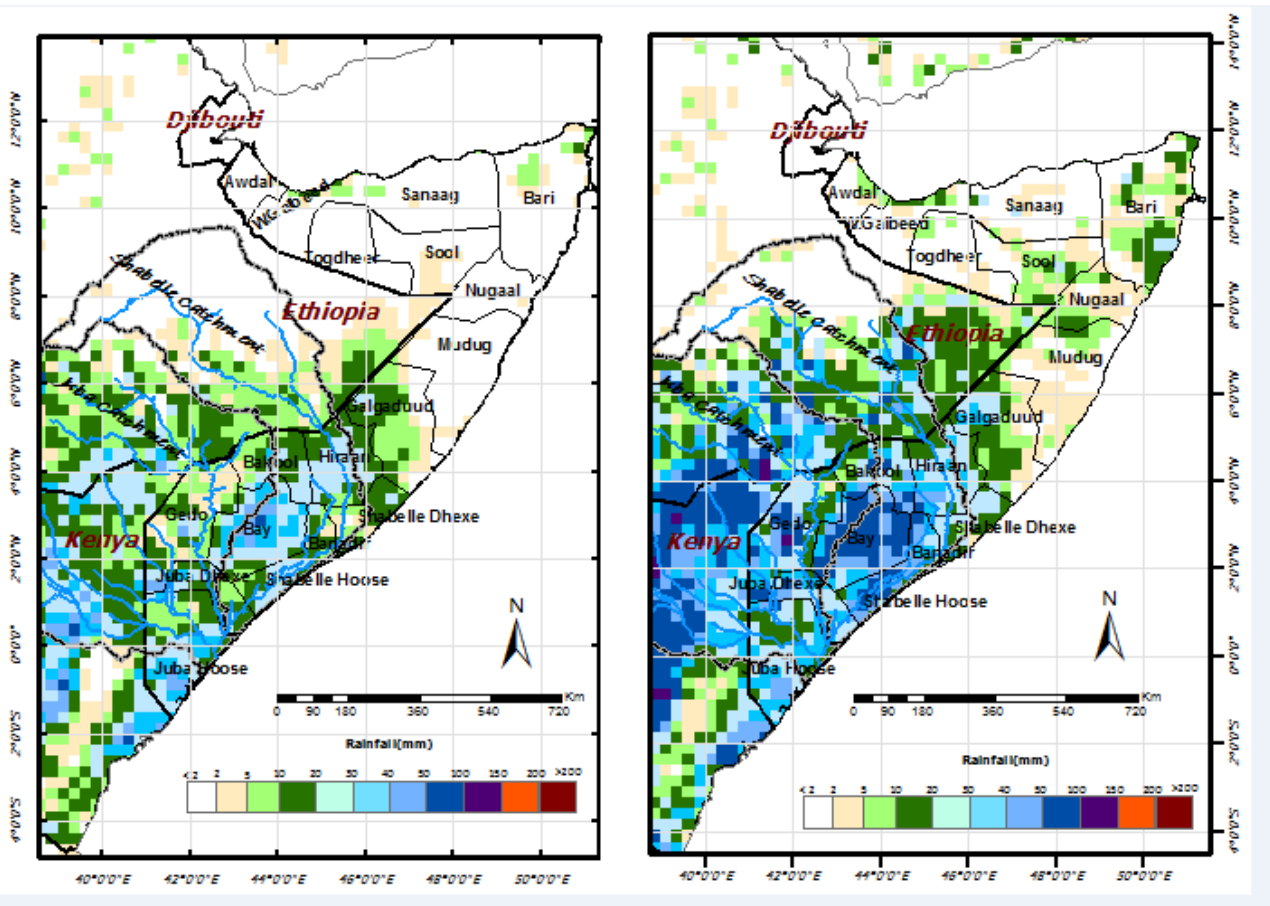

The good rains are expected to continue in the next seven days as seen in Map 1 and Map 2 below. With a reduction of intensity and spatial distribution towards the end of the week.

River levels are expected to continue rising with a **moderate** to **high** risk of flooding along the Juba and Shabelle Rivers. Flash floods may also occur in areas where the forecast indicates high rainfall.

Users are advised that this is a forecast and at times there may be discrepancies between forecast and actual amounts of rainfall received. The forecast, observed river levels and rainfall amounts are updated on a daily basis and can be found on this link: <http://systems.fao.so.net/frims/>

Map 1: 3 days rainfall forecast (06-08 November 2017)

Map 2: 7-day cumulated rainfall forecast (06-12 November 2017)
