

Rainfall Forecast Somalia

Issued: 19/04/2016

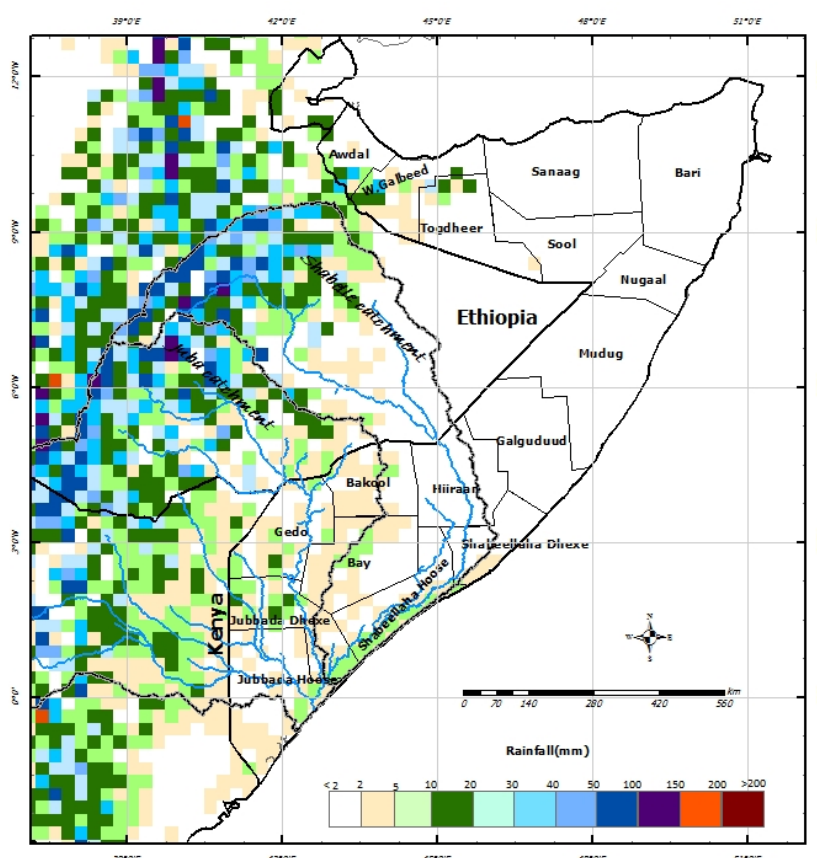

Food and Agriculture Organization
of the United Nations

SWALIM

Wet conditions persisted in the last few days in Somaliland with light to moderate rains being recorded in the western parts. Moderate rains have also been reported in parts of southern regions and in the Ethiopian highlands and this has consequently led to an increase in river levels in the upper reaches of Juba and Shabelle Rivers inside Somalia. Most parts of Puntland and central regions remained dry with a few places in northern Sanaag region receiving light rains.

The three days rainfall forecast is calling for a reduction of rainfall activities in many areas. Light rains may be experienced in western Somaliland and southern regions The upper parts of the Ethiopian highlands are expected to get moderate rains. Dry conditions are expected in the other parts of the country.

3-day accumulated rainfall forecast (19/04/2016 to 21/04/2016)

Each cell on the map represents the forecasted accumulated rainfall over the next 72 hours
