The probable location of the spillage, given the flood signs in the surrounding area from this point. This was repaired in 2013 with a new embankment built in 2014. Although evidence of the breakage was detected in the area in 2012, it was not recorded until after 2014. The village is about 50 m from this point with previous records confirming vulnerability. However, in Feb'14 the breakage was closed but evidence of the floods are evident. No further investigation was conducted after 2014. DEM and previous reports confirm the vulnerability.

Barey (22 Feb 14) - This breakage caused several floods in the past. The analysis of the image acquired 27 Dec 13 shows that the area flooded and an open breakage was present. Lack of vegetation (trees) was detected in the area.

Muukay (22 Feb 14) - The image of Sept 13 shows a spillage from this point or another one. The analysis of the image acquired 27 Dec 13 shows that the area flooded and an open breakage was present. A mound of flooding in the same area is evident in the image acquired 28 Dec 13.
