

# Part 3

## Detailed characteristics of the Juba River Faahfaahinta sifaalahaa Wabiga Juba

## Luuq

The city of Luuq in Gedo Region is one of the oldest cities in Somalia. It is encircled by the Juba River, which loops in a horseshoe shape. Luuq is also known as Luuq Ganaane.

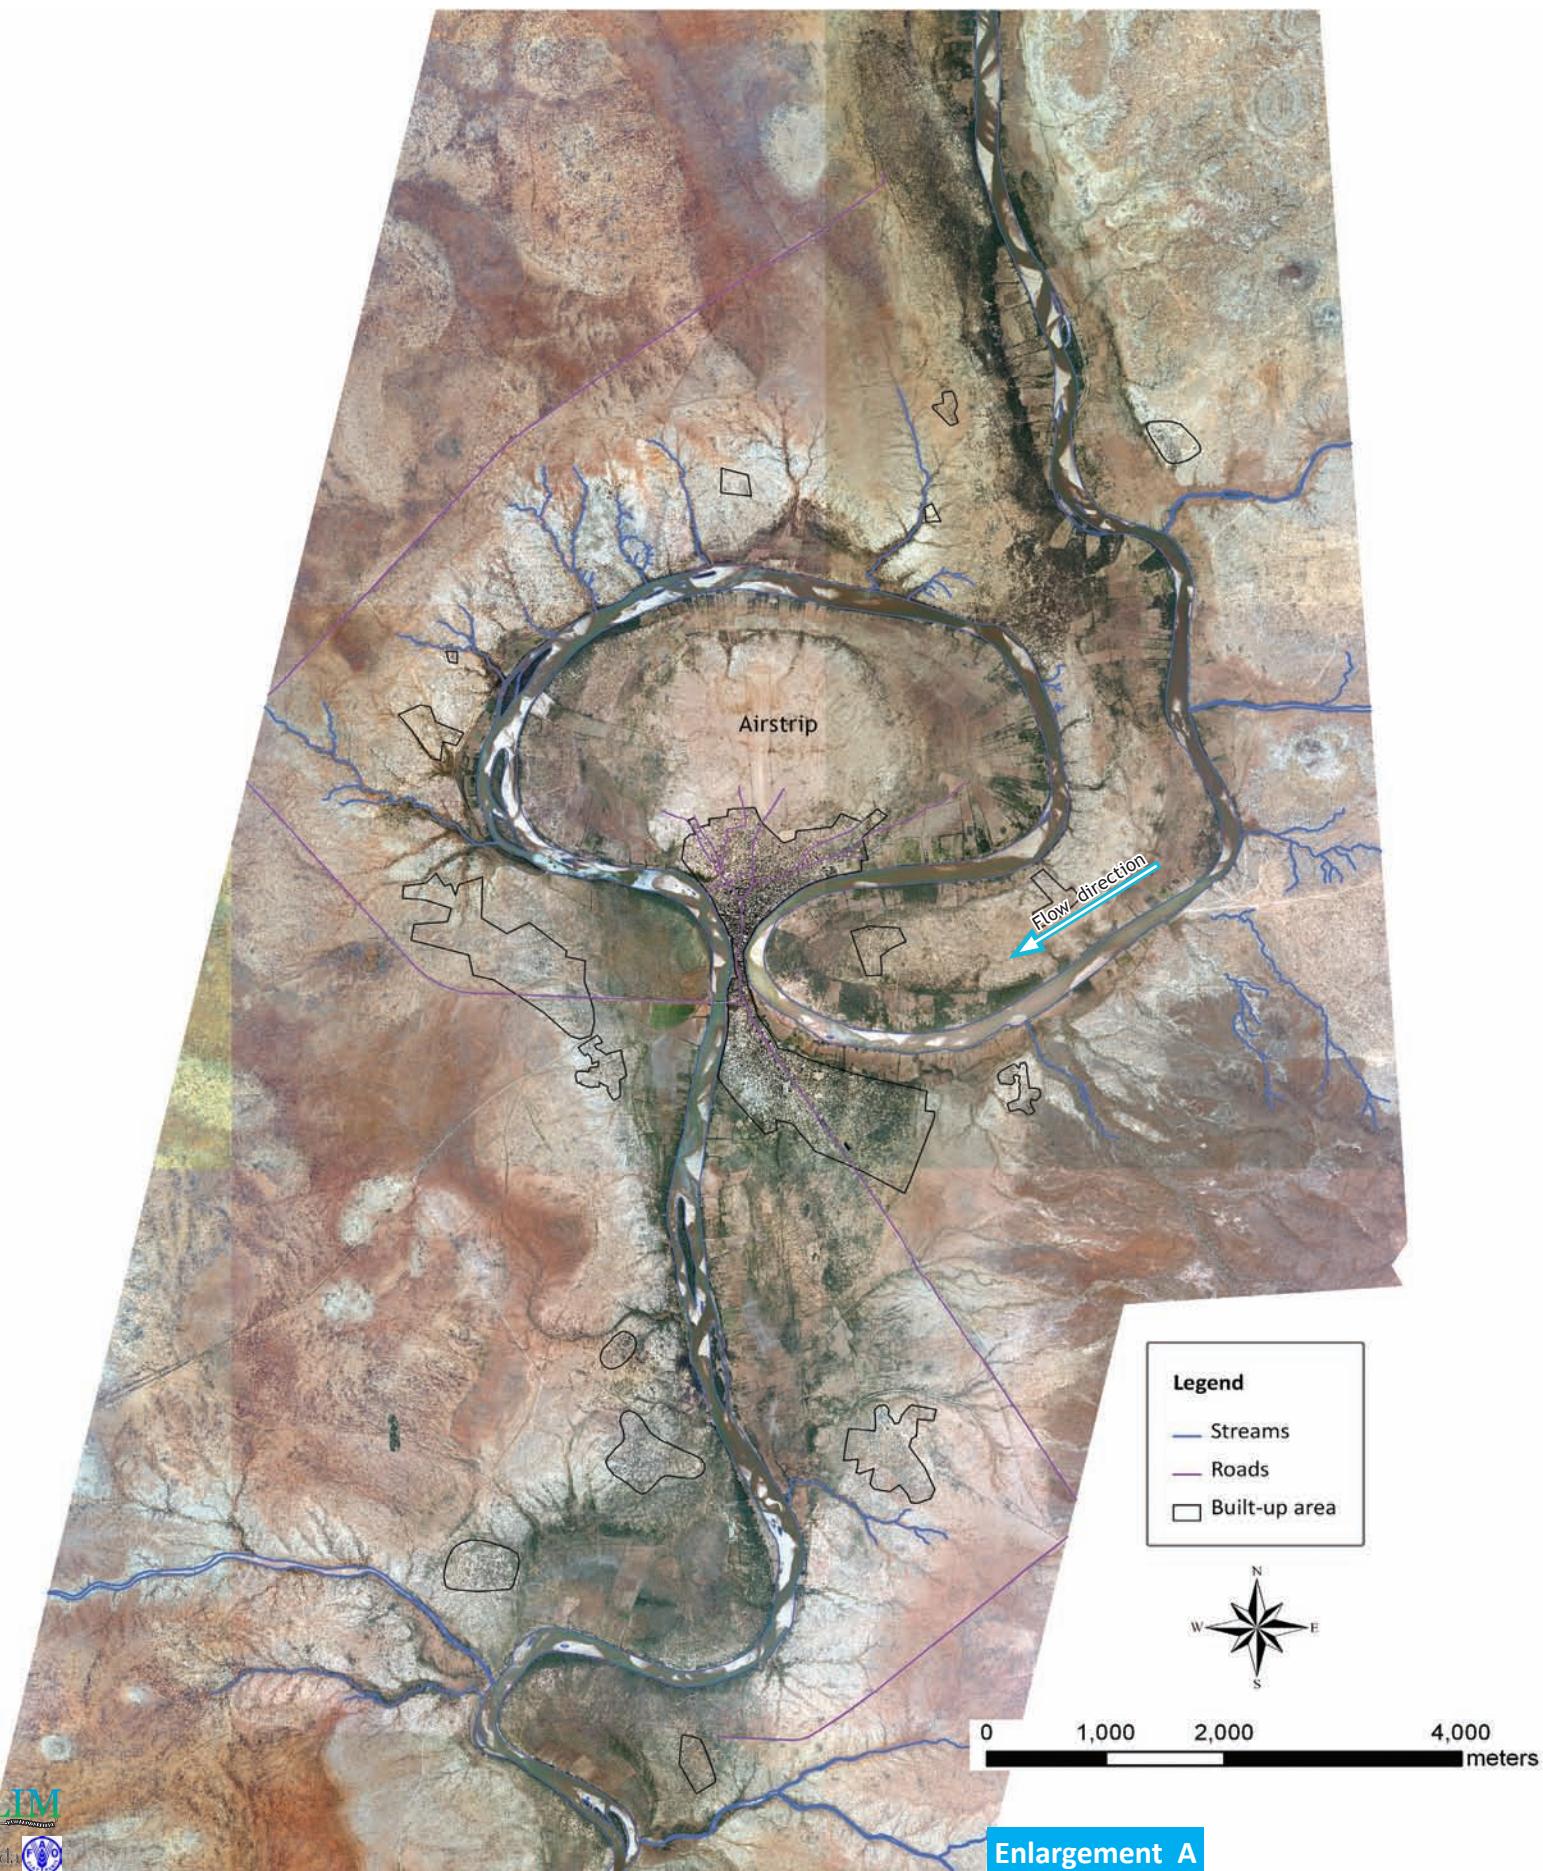

The Juba River has great influence on the city and the surrounding areas. Entrance to the eastern and western side of the town is situated within 100 m from the river banks. The northern part of the town is completely enclosed by the river at a distance of about 4 km. Only the southern part of the city has open land, free from the river's enclosures.

Magaalada Luuq waxay ka tirsan tahay Gobolka Gedo waxayna ka mid tahay magaalooinka ugu faca weyn Soomaaliya. Magaalada waxaa xero geliyey Wabiga Juba, kaasoo isku soo laabka wabigu uu u qaab eg yahay qoob faras. Luuq waxaa kale oo loo yaqaan Luuq Ganaane.

Wabiga Juba wuxuu saamayn weyn ku leeyahay magaalada iyo meelaha ku wareegsan. Magaalada meelaha laga soo galo ee bariga iyo galbeedka waxay u jiraan gebiyada wabiga wuxuun ku dhaw 100 m. Qaybta waqooyi ee magaalada waxay ku xareysan tahay dhamman wabiga ilaa masaafu qiyaastii ah 4 km. qaybta koonfureed oo keliya ayaa dhul irid ah leh, oo ay ka feydan tahay xerada wabiga.

## River meanders Leexleexyada wabiga

Enlargement A

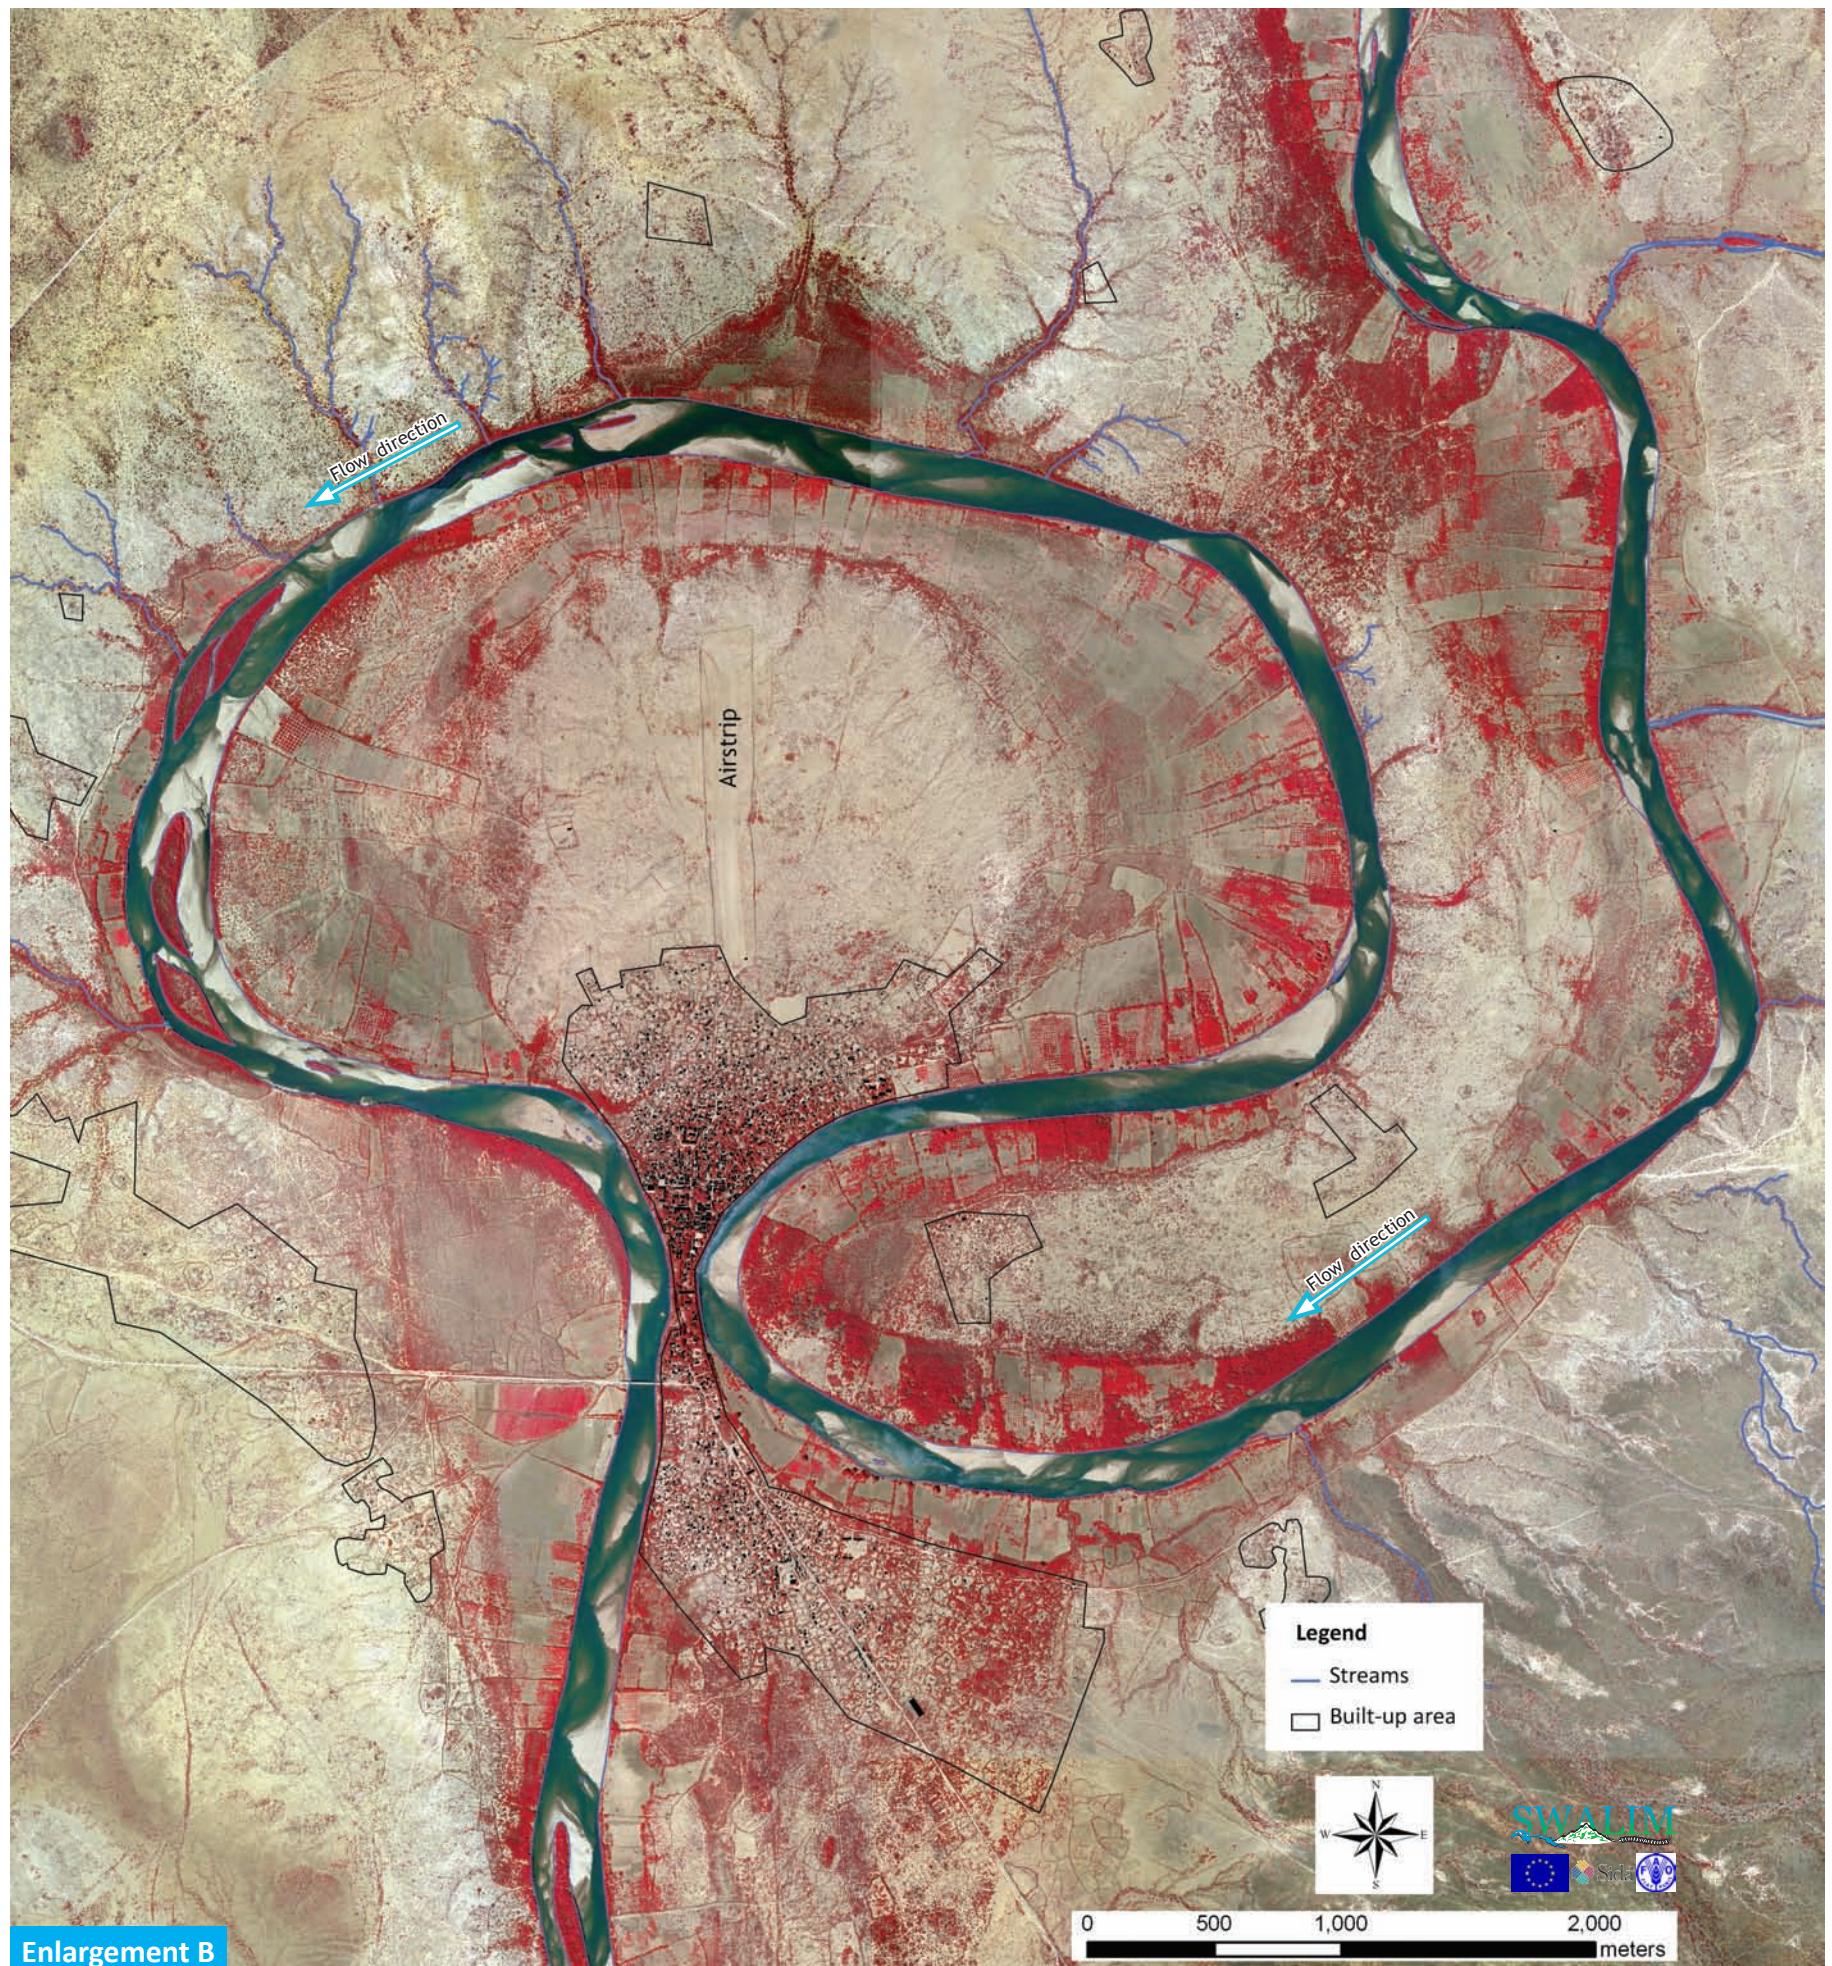

At Luuq the Juba River loops and forms the impression of sand being poured out of a bottle. Half of Luuq's settlement is out of the bottle and the other half is still inside the bottle.

An airstrip is found inside this loop. Crop fields and natural vegetation are the land cover types inside the river loop.

Luuq Wabiga juba wuu isku soo laabaa wuxuu sameeyaa sansaan ah bacaad dhalo laga qubay. Kalabar Luuq xaafadaheeda dhala bannaanka ayey ka jiraan barka kalana weli wuxuu ku jiraa dhalada.

Gegi dayaaradeed ayaa gudaha isku laabka ku taal. Beeraha dalagyada iyo dhirta dabiiciga ah waa noocyada h'ga dhulka gudaha isku laabka webiga.

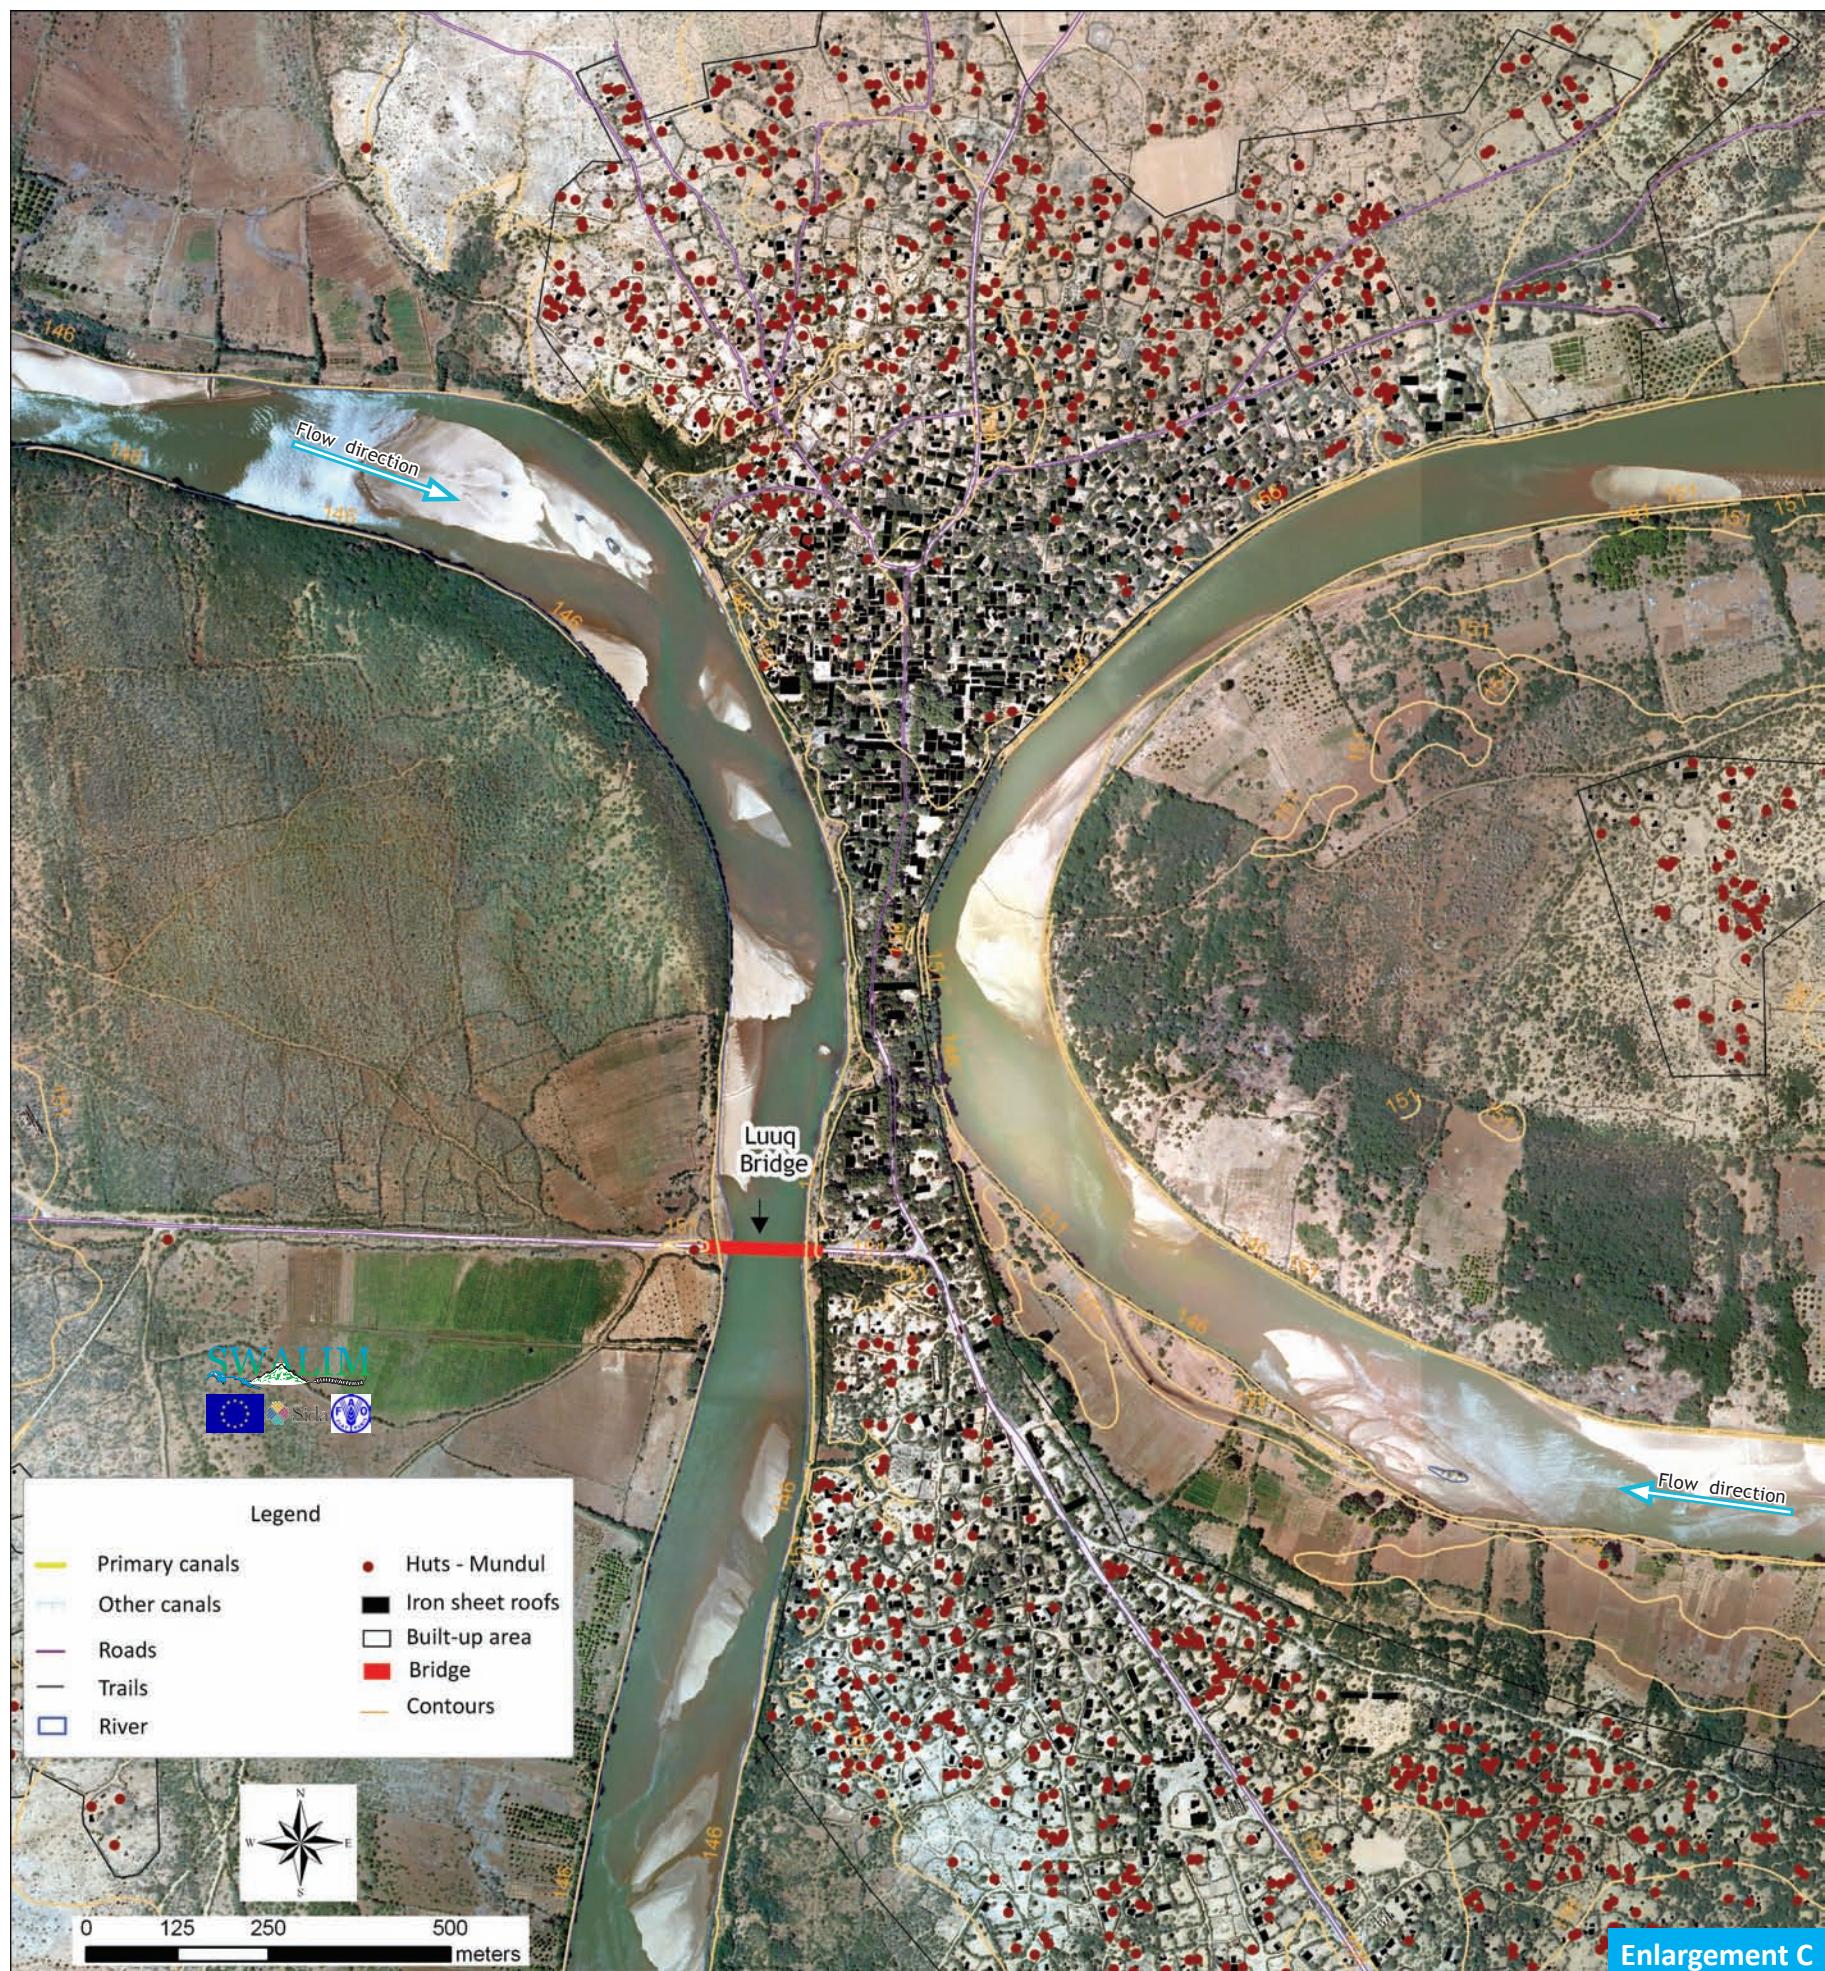

## Luuq town in infrared Magaalada Luuq oo shucaac casaan leh

This is an infrared image of the Juba River loop at Luuq. Actively photosynthesizing vegetation is represented by the red colour and comprises crop fields and natural vegetation.

Midkaani waa muuqaalka shucaaca casaanka ah ee Wabi Juba isku laabkiisa Luuq. Dhirta sida xoogga leh u cagaaran waxay la soo baxaysaa midabka casaanka ah waxayna isugu jirtaa dalagyada beeraha iyo dhirta dabiiciga ah.

## Town map of Luuq Khariidadda magaalada Luuq

This photograph is a zoom on Luuq town. Notice that Luuq is squeezed in the middle by the river loop, almost cutting the settlement into two. Notice the gridded pattern of the tree crops along the river. The blocky pattern of other crop fields is also visible in the image.

Masawirkaan waa ballaarin ah magaalada Luuq. Eegg sida Luuq uu ugu soo ciririye bartamaha isku laabka wabiga, oo sigaya inuu degmada u kala goyo labo qaybood. Eeg hannaanka dalagyada dhirta loogu beeray jiidda wabiga si aad moodo shabaq. Hannaanka sakadsakada wax aad moodo oo ah beero dalagyo kale ayaa iyagana lagu arki karaa masawirka.

## Crop fields Beeraha dalagyada

The image depicts the typical pattern of the crop fields in relation to the river. The crop fields are oriented perpendicular to the river and comprise of tree crops, cereals and other herbaceous crops. Natural vegetation comprised mainly of shrubs is also common here.

Masawirku wuxuu kuu muujinaya sida u yahay hannaanka u gaarka ah beeraha dalagyada marka loo fiiryo wabiga hareerihiisa. Beeraha dalagyada waxay u jahaysan yihiin si ku toosan wabiga oo waxay isugu jiraan Geedmirood, badar iyo dalagyo kale oo nagaar ah. Waxaa kale oo si caadi ah halkaan looga helaa dhir dabiici ah oo badanaa ah geed gaab.

## Elevation, land use and land cover

### Joogga, isticmaalka dhulka iyo hu'ga dhulka

#### Elevation

The river channel varies with the changing terrain. Some areas have a very narrow floodplain while other areas are wide. The adjacent terrain is rough and steep with scattered hills on either side of the river channel. The river meanders through this terrain making sharp turns as it negotiates the rocky hilly landscape.

#### Joogga

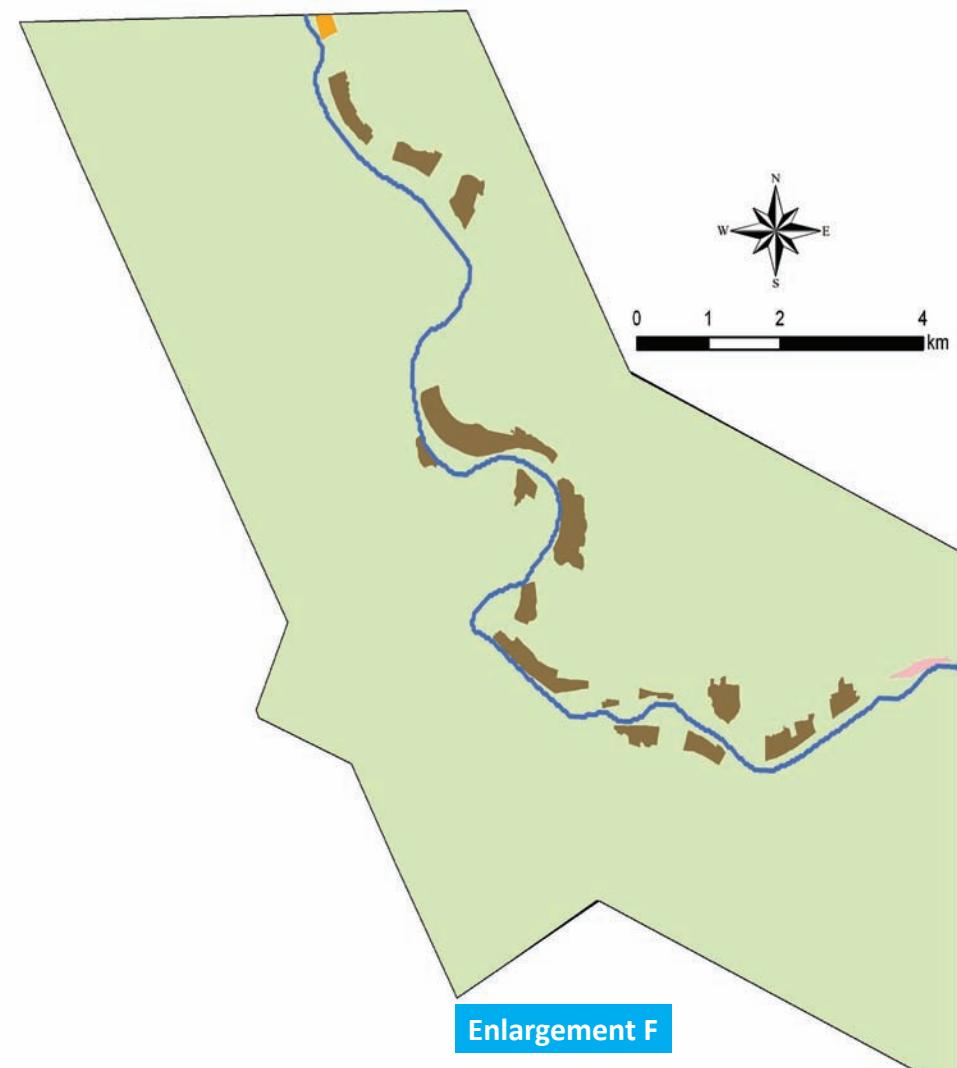

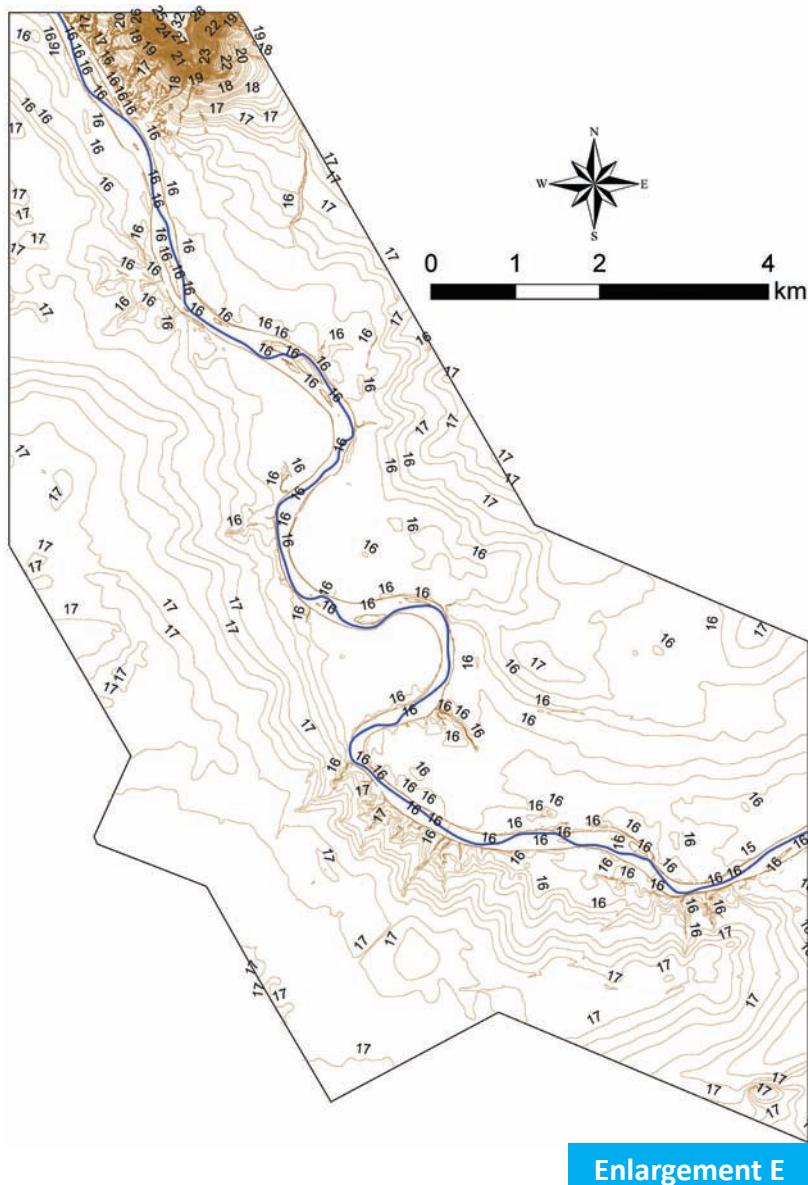

Dooxa wabigu wuxuu isla bedeleyaa dabeeecdda dhulka. Meelaha qaarkood waxay leeyihiin dhul carro daadkeentay ciriiri ah halka meelo kalana ay leeyihiin dhul carro daadkeentay ballaaran. Dhulka dooxa wabiga la dariska ah waa qallayf waana hoobad leh buuro teelteel ah oo ku kala yaal wabiga labadiisa dhinac. Wabigu wuxuu ku war-wareegsadaa dhuulkaan dhexdiisa asagoo sameeya leexlexyo si cad u go'an inta uu dhexmarayo dhulka buuraleyda dhadhaab ah.

#### Land use and land cover

Land cover in this area consists mainly of natural vegetation. Cultivation is limited by the nature of the flood plain which varies along the river channel. Crop fields are mostly confined to sections of the river channel with a wider floodplain. Cultivation is also limited by soil conditions especially because this area has shallow stony soils.

#### Isticmaalka dhulka iyo hu'ga dhulka

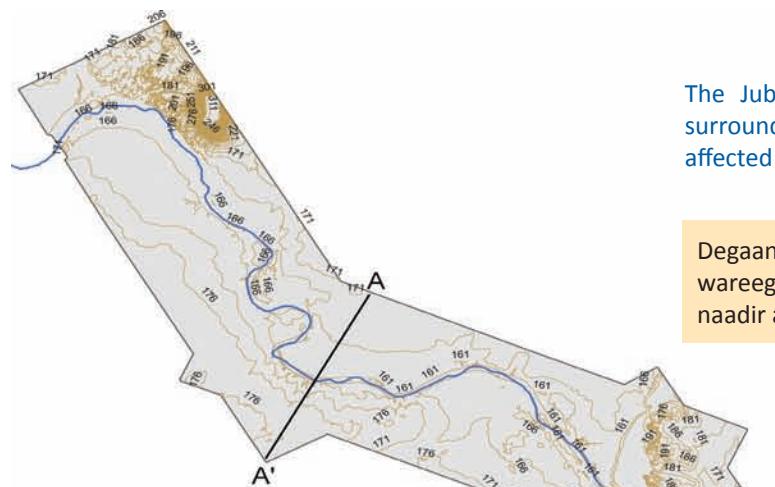

Hu'ga dhulka deegaankan wuxuu ka samaysan yahay badanaa dhir dabiici ah. Waxa la beerto waxaa koobay dabiicadda bannaanka carro daadkeentayda ah leh taasoo isbedbedsha jiidda dooxa wabiga. Beeraha dalagyada badanaa waxay ku kooban yihiin waaxyo ka tirsan doox wabiga kuwaasooo leh dhul ballaaran oo carro daadkeentay ah leh. Waxaa kale oo waxbeerashada xadaynaya dabiicadda ciidda gaar ahaan sababtu oo ah waxay leedahay carro qoto gaaban oo dhagaxley ah.

## Morphology Qaab-dhismaha

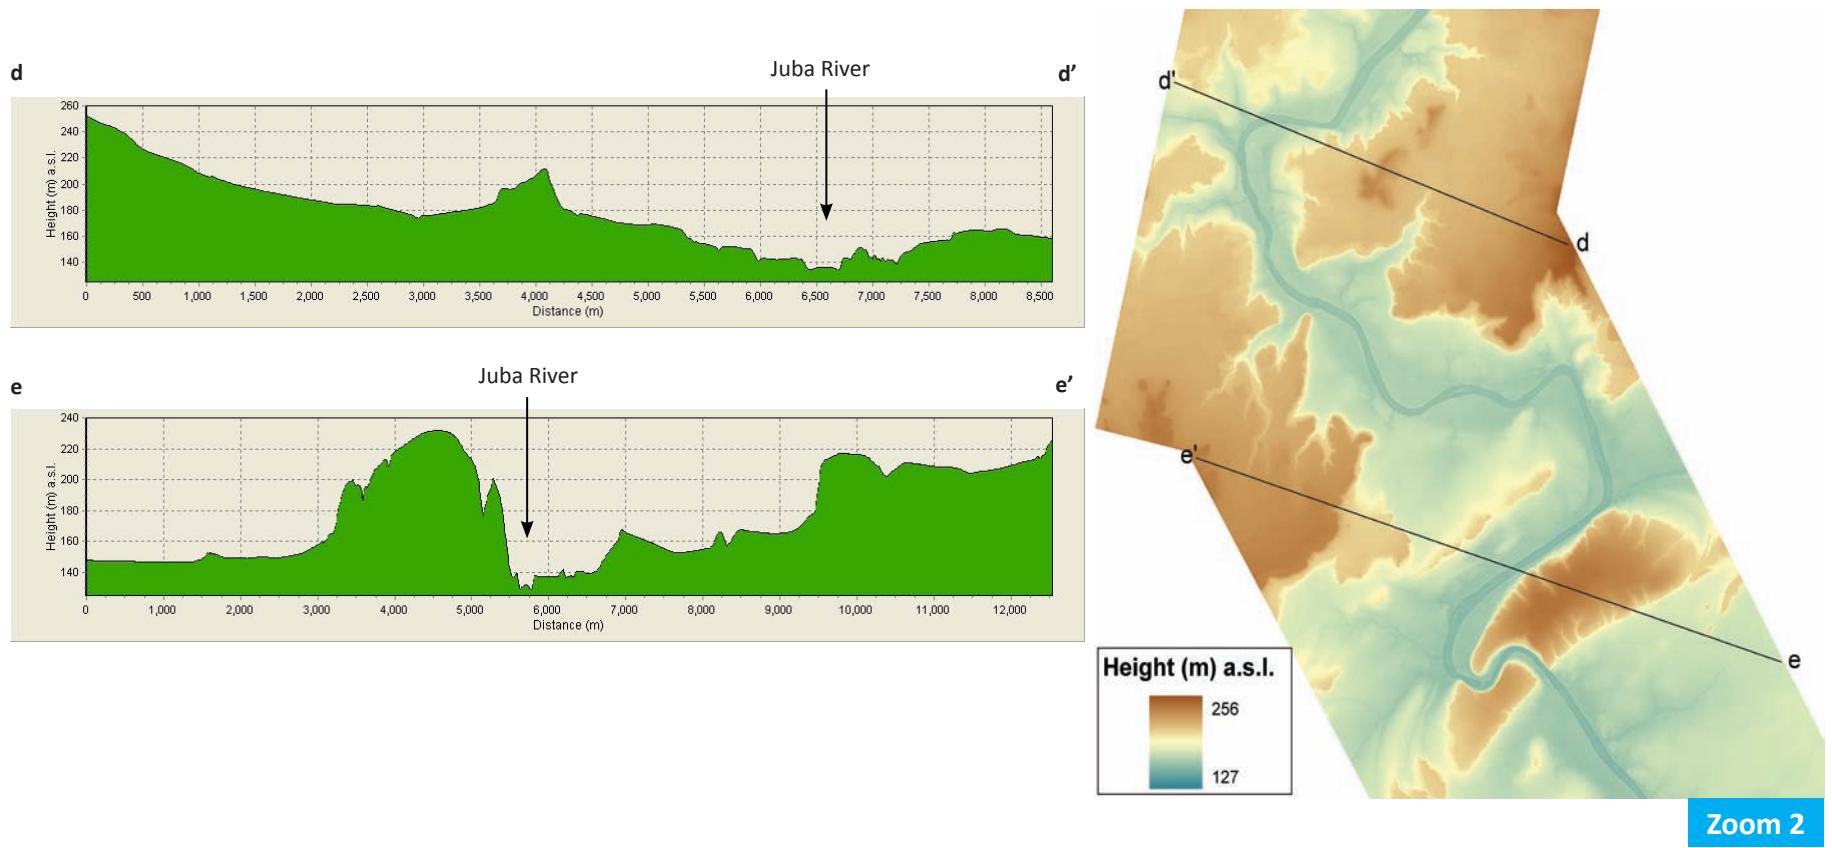

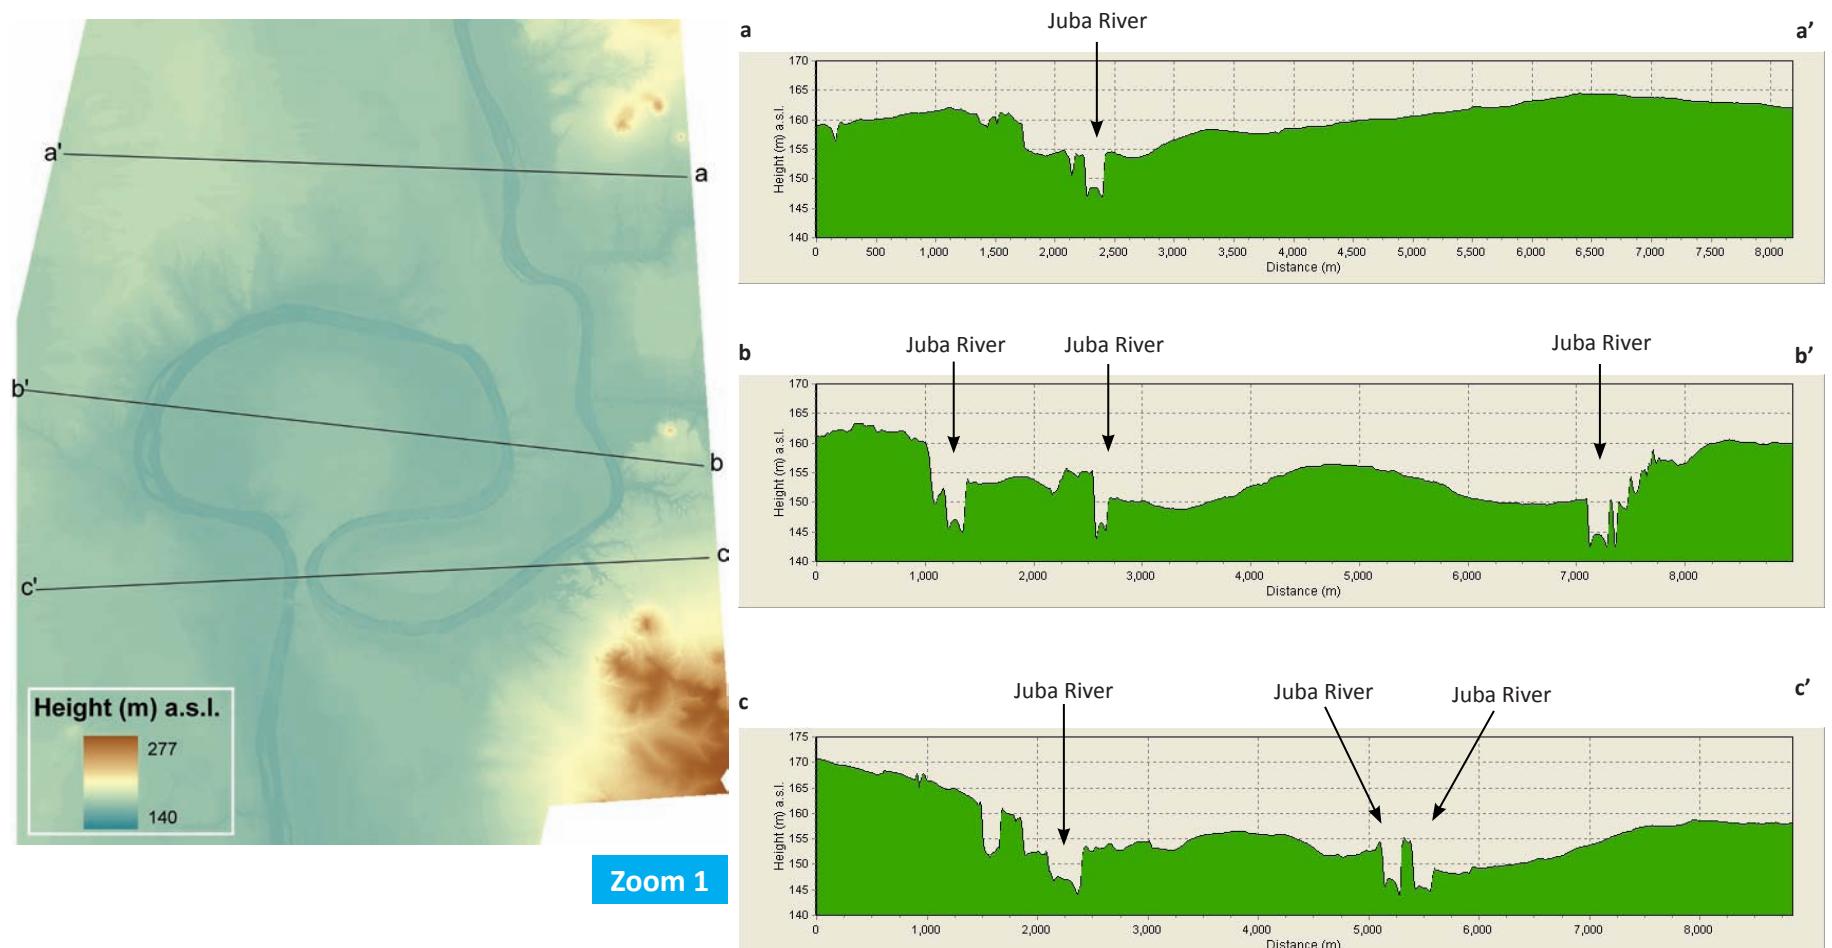

The Juba River in this area flows in a deep valley, surrounded by ridges and hills. This area of Luuq is rarely affected by floods.

Degaankan Wbaiga Juba waa doox qotodheer, oo ay ku wareegsan yihiin dullo iyo buuro. Degaankaan Luuq si naadir ayaa fatahaad ugu dhacdaa.

## Morphology

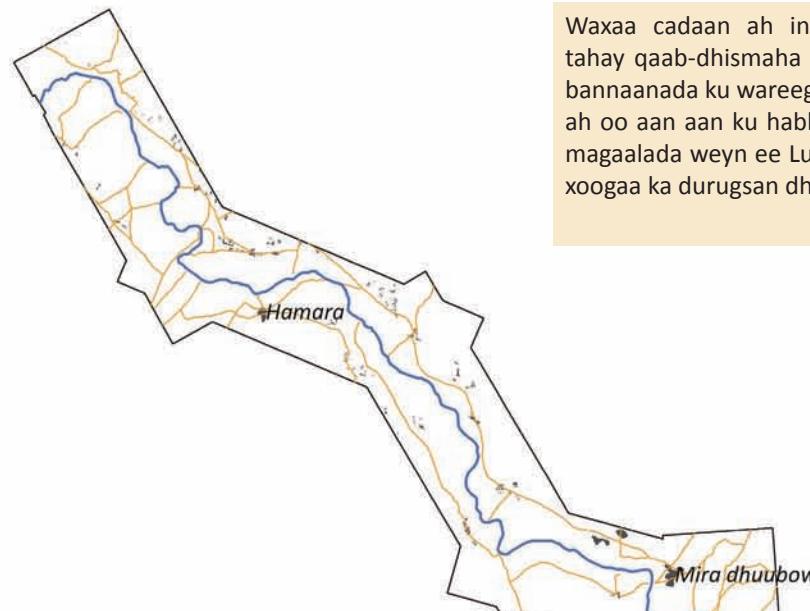

### Qaab-dhismaha

## Roads and settlements

### Waddooyinka iyo degmooyinka

It is clear that the location of the settlements is according to the morphology of this area: the river is lower than the surrounding plains and it has a very narrow alluvial plain that is not suitable for settling. Thus, apart from the big town of Luuq, most of the villages are built at some distance from the alluvial plain.

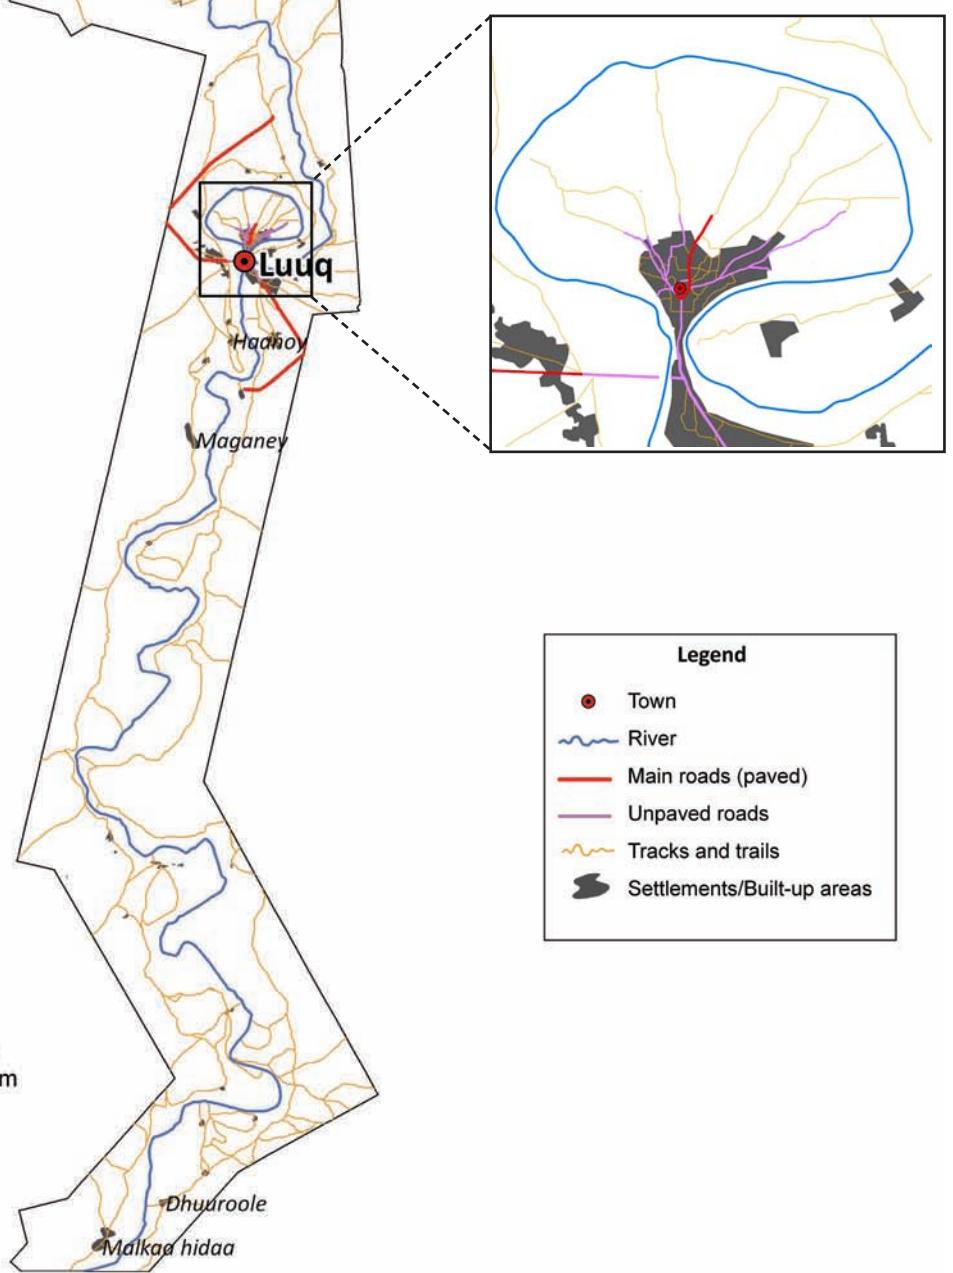

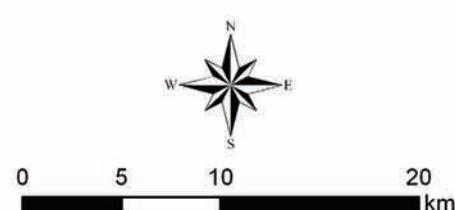

Waxaa cadaan ah in kobta ay degsiimooyinku yaaliin ay waafaqsan tahay qaab-dhismaha dhulka dagaankaan. Wabigu waa uu ka hooseeyaa bannaanada ku wareegsan misna wuxuu leeyahay carrodhig bannaan ciriri ah oo aan aan ku habboonay in la dago. Sidaas darteed, marka la reebo magaalada weyn ee Luuq, inta bada tuuloyinku waxaa laga dhisay meelo xoogaa ka durugsan dhulka bannaaka carrada biyokeentayda ah.

Transport of farm produce by donkey to the market is a common site

Dameerahu waa gaadiidka loo isticmaalo wax soo saarka beeraha laguna geeyo suuqyada ahna meel caadi

## Climate and water resources

### Cimilad iyo khayraadka biyaha

Luuq and its environs are generally dry, receiving mean annual rainfall of only 271 mm. Most of the rains fall in four months, April and May then in October and November. The other eight months are either dry or receive minimal rainfall to support any agricultural activity. Maximum temperatures can reach as high as 40 °C in this area.

Guud ahaan Luuq iyo deggaankeeda waa mid qalayl ah, waxayna heshaa roobab celcelis ahaan dhan sannadkii 271 mm oo qura. Badanaa roobabkaas waxa ay ku da'an muddo 4 bilood ah, Abrille iyo Maajo iyo Oktoobar-Nofeembar. Sideeda bilood ee kale waa qalayl ama waxay heshaa roob aad u yar kaas oo aan taageerin hawlah wax beerashada. Dagaankan kulbeegga ugu sarreeya wuxuu gaari karaa ilaa 40 °C.

#### River gauge station details

Grid reference: 3:47:30N, 42:32:30E  
Altitude: 141.0 m a.s.l  
Catchment area: 207 000 km<sup>2</sup>  
Daily mean flow: 198.0 m<sup>3</sup>/s  
Current status: Operational

River flow in Luuq has two peaks, in April and May and October and November. They coincide with the peaks for the *Gu* and *Dayr* rainy seasons. The months of January to March are characterised by very low flows, and the river can hardly support irrigation even though it does not dry up completely.

Socodka biyaha wabiga Luuq waxay gaaraan labada fiiq sare oo kala ah Abril-May iyo Oktobar-Nofambar. Waxayna ku beegmaan xilliga roobabka gu'ga iyo Dayta. Bilaha Janaayo ilaa Maarsa waxa lagu sifeeyaa in socodka biyahu uu aad u hooseeyo, makaasna Wabigu si dhible ayuu u caawin karaa waraabka in kastoo wabigu uunan gabi ahaan qalalin.

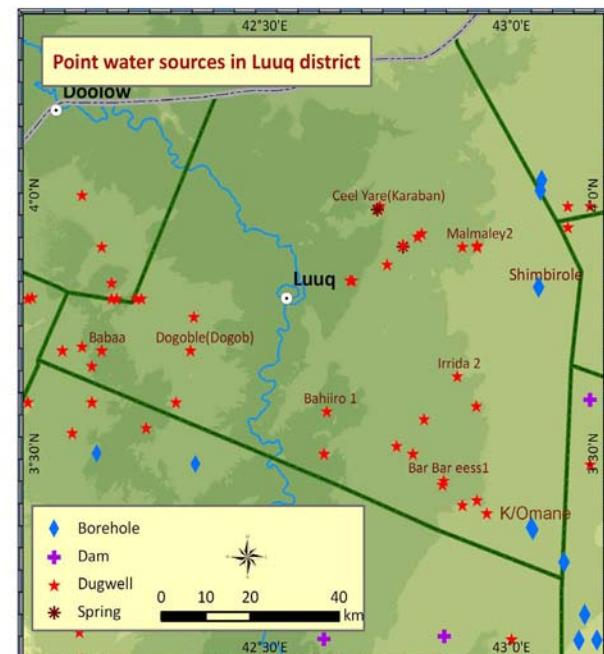

Animal watering point located in Gedo. The source of water is a shallow well

Dar xoolahu ka cabaan oo Gedo ku yaal. Isha biyaha laga helo waa ceelasha gaagaaban

Many of the strategic water points in Luuq district are located outside the district capital. The town, being surrounded by the Juba River relies more on the river for water supply. The average depth of shallow wells is 5 - 10 m. The salinity of the water varies from source to source, but generally EC is in the range of 450 - 5 000 µS/cm.

Tiro badan oo ilaha biyaha lamama maarmaan ka ah ee degmada Luuq waxay ku yaalaan meelo ka baxsan xarunta degmada. Magaalada oo uu ku wareegsan yahay wabiga Juba waxay aad ugu tiirsan biyaha wabiga ay ka hesho. Gunta ceelasha gaagaaban waxay gaarta 5 - 10 m celcelis ahaan. Milixda biyaha waa ay kala duwan tahay marka loo eego ceel ceel, laakiin guud ahaan EC - da waxay u dhexaysaa 450 - 5 000 µS/cm.
